

Custom Functions Summary

APPENDIX

This appendix lists by name all the custom functions used in this edition of the book. The source code for each function is in your copy of the *DIPUM3E Support Package*. Section 1.8 contains details about the package and how to obtain it. The page numbers listed in the table refer to pages where a function is first used or mentioned (see the Index for additional page references to these functions). Our use of the symbol “—” as a page reference indicates a function that is not mentioned explicitly in the book.

DIPUM3E CUSTOM FUNCTIONS TABLE

Function Name	Description	Page
adpmedian	Performs adaptive median filtering.	273
aggfcn	Aggregation function for a fuzzy system.	179
approxfcn	Approximation function.	181
average	Computes the average value of a 1-D or 2-D array.	62
bandfilter	Computes frequency domain band filter transfer functions.	229
basisImages	Displays the basis images of a transformation matrix.	465
bayesgauss	Classifier for Gaussian patterns.	903
bellmf	Bell-shaped membership function.	176
binary2rgb	Converts high values in a binary image to one RGB color.	—
bound2eight	Convert a 4-connected boundary to an 8-connected boundary.	794
bound2four	Convert an 8-connected boundary to a 4-connected boundary.	795
bound2im	Converts a boundary to an image.	790
boundarydir	Determines the direction of a sequence of planar points.	806
bsubsamp	Subsamples a boundary.	795
changeClass	Changes the storage class of an image.	—
chromaticityDiagram	Plots a chromaticity diagram.	388
cnnactivate	Activation function for CNNs.	956
cnnbp	Convolutional neural network backpropagation.	959
cnnclassify	Classify input images using a cnn.	961
cnnff	Convolutional net network feedforward.	957
cnngradients	Computes gradients for use in cnn weight updates.	956
cnninfo	Parameters and notation of convolutional neural net.	956

<code>cnninit</code>	Initializes convolutional neural network.	957
<code>cnnpool</code>	Pools (subsamples) the elements of a feature map.	956
<code>cnnttrain</code>	Training of convolutional neural network.	956
<code>cnnupdateweights</code>	Updates the weights and biases of a <code>cnn</code> .	956
<code>cnotch</code>	Generates notch filter transfer functions.	235
<code>colorgrad</code>	Computes the vector gradient of an RGB image.	445
<code>colorMatchingFunctions</code>	Generates CIE color-matching functions.	384
<code>colorseg</code>	Performs segmentation of a color image.	448
<code>colorSwatches</code>	Displays a set of colors on individual squares.	392
<code>compare</code>	Computes and displays the error between two matrices.	520
<code>connectpoly</code>	Connects the vertices of a polygon with straight lines.	795
<code>conwaylaws</code>	Applies Conway's genetic laws to a single pixel.	607
<code>coord2mask</code>	Generates a binary mask from given coordinates.	759
<code>cornerprocess</code>	Processes the output of function <code>cornermetric</code> .	—
<code>covmatrix</code>	Computes the covariance matrix and mean vector.	848
<code>curveDisplay</code>	Display of 2-D curve.	739
<code>curveManualInput</code>	Manual input of curve coordinates.	738
<code>cv2tifs</code>	Decodes a TIFS2CV compressed image sequence.	578
<code>defuzzify</code>	Output of fuzzy system.	179
<code>dftfilt</code>	Performs frequency domain filtering.	210
<code>dftuv</code>	Computes meshgrid frequency matrices.	217
<code>diameter</code>	Measures the diameter and related properties of image boundaries.	814
<code>div2D</code>	Computes the divergence of a 2D vector field.	—
<code>elemdup</code>	Duplicates the elements of an array in specified dimensions.	—
<code>endpoints</code>	Computes end points of a binary image.	—
<code>fcnnactivate</code>	Activation function for FCNNs.	943
<code>fcnnbp</code>	Backpropagation in fully-connected neural net.	942
<code>fcnnclassify</code>	Fully-connected neural network classifier.	943
<code>fcnnff</code>	Feedforward in a fully-connected neural net.	936
<code>fcnninfo</code>	Parameters and notation of fully-connected neural net.	935
<code>fcnninit</code>	Initialize fully-connected neural net.	936
<code>fcnnMSE</code>	Outputs the mean squared error in a fully-connected neural net.	—
<code>fcnntrain</code>	Train a fully-connected neural net.	942
<code>fcnnupdateweights</code>	Updates the weights of fully-connected neural net.	942
<code>flipdims</code>	Flips an array in specified dimensions.	—
<code>frdescp</code>	Computes Fourier descriptors.	817
<code>freemanChainCode</code>	Computes the Freeman chain code of a boundary.	797
<code>fun2hist</code>	Generates a histogram from a given digital function.	123
<code>fuzzyfilt</code>	Fuzzy edge detector.	190
<code>fuzzysysfcn</code>	Fuzzy system function.	180
<code>fwtdcompare</code>	Compare <code>wavedec2</code> and <code>wavefast</code> .	488
<code>geotrans</code>	Generates affine and projective geometric transformations.	330
<code>getCIFAR10images</code>	Extracts images from the CIFAR10 database.	974
<code>getMNISTimages</code>	Extracts images from the MNIST database.	969
<code>histroi</code>	Computes the histogram of an ROI in an image.	265
<code>hpfilter</code>	Computes frequency domain highpass filter transfer functions.	224
<code>hsi2rgb</code>	Converts an HSI image to RGB.	411
<code>huff2mat</code>	Decodes a Huffman encoded matrix.	536
<code>huffman</code>	Builds a variable-length Huffman code for a symbol source.	525

i2percentile	Computes a percentile given an intensity value.	662
ice	Interactive Color Editor.	428
ifrdescp	Computes inverse Fourier descriptors.	817
ifwtcompare	Compares <code>waverec2</code> and <code>waveback</code> .	505
illuminant	Spectral power distribution of common illuminants.	—
im2jpeg	Compresses an image using a JPEG approximation.	552
im2jpeg2k	Compresses an image using a JPEG 2000 approximation.	561
im2minperpoly	Minimum perimeter polygon.	806
imageStats1	Sample function used in Chapter 2.	76
imageStats2	Sample function used in Chapter 2.	76
imageStats3	Sample function used in Chapter 2.	77
imageStats4	Sample function used in Chapter 2.	78
imageStats5	Sample function used in Chapter 2.	80
imblend	Computes the equally weighted sum of two images.	52
imcircle	Creates a binary image of circle.	708
imcolorcode	Converts values in a gray or binary image to RGB color.	712
imnoise2	Outputs noisy image and random matrix with given PDF.	255
imnoise3	Generates 2-D sinusoidal spatial patterns.	259
implfcns	Implication functions for a fuzzy system.	178
imratio	Computes the ratio of the bytes in two images/variables.	518
imstack2vectors	Extracts vectors from an image stack.	848
imtransform2	2-D image transformation with fixed output location.	—
imwarp2	Performs 2-D geometric transformation with fixed output location.	347
intensityScaling	Scale intensities of an image to the full [0 1] range.	116
intensityTransformations	Grayscale image intensity transformations.	111
interactive	Illustrates inputs from keyboard and mouse.	96
interparc	Interpolate points along a curve.	737
intline	Integer-coordinate line drawing algorithm.	795
invmoments	Computes invariant moments of an image.	843
iseven	Determines which elements of an array are even numbers.	235
isodd	Determines which elements of an array are odd numbers.	236
iswhole	True for integers (whole numbers).	58
jpeg2im	Decodes an IM2JPEG compressed image.	556
jpeg2k2im	Decodes an IM2JPEG2K compressed image.	564
kmeansClustering	Standard kmeans algorithm.	682
lambda2xyz	Converts wavelength to tristimulus values.	385
lambda2fcns	Lambda functions for a set of fuzzy rules.	176
levelsetCurvature	Computes the curvature of a level set function.	757
levelsetForce	Scalar force field for level-set segmentation.	761
levelsetFunction	Generates a level-set function.	758
levelsetHeaviside	2D Heaviside and impulse for level set segmentation.	761
levelsetIterate	Iterative solution of level set equation.	755
levelsetReset	Reinitializes a signed distance function.	761
localmean	Computes an array of local means.	—
localthresh	Local thresholding.	—
lpc2mat	Decompresses a 1-D lossless predictive encoded matrix.	547
lpfilter	Computes frequency domain lowpass filter transfer functions.	220
mahalanobis	Computes the Mahalanobis distance.	892
makefuzzyedgesys	Script to make MAT-file used by FUZZYFILT.	189

manualhist	Generates a two-mode histogram interactively.	123
maps2vectors	Converts maps in the output of a cnn to vectors.	956
mat2huff	Huffman encodes a matrix.	532
mat2lpc	Compresses a matrix using 1-D lossless predictive coding.	546
minDistanceClassifier	Implements a minimum distance classifier.	895
minusOne	Multiplies an input array by $(-1)^{x+y}$.	—
mmap2labels	Converts a membership matrix to vector of class labels.	975
movie2tifs	Creates a multiframe TIFF file from a MATLAB movie.	571
movingthresh	Image segmentation using a moving average threshold.	—
myRegionProps	Properties of a single binary region.	—
ntrop	Computes a first-order estimate of the entropy of a matrix.	523
onemf	Constant membership function (one).	176
otsuthresh	Computes Otsu's optimum threshold from a histogram.	660
paddedsizes	Computes padded sizes useful for FFT-based filtering.	205
patternShuffle	Shuffle pattern vectors.	925
percentile2i	Computes an intensity value given a percentile.	662
perceptronClassify	Perceptron classifier for two classes.	923
perceptronTrain	Training of two-class perceptron.	920
pixeldup	Duplicates pixels of an image in both directions.	—
polyangles	Computes internal polygon angles.	914
predicate	Used in function <code>splitmerge</code> .	677
principalComponents	Computes the principal components of a vector population.	849
quantize	Quantizes the elements of a UINT8 matrix.	550
randvertex	Adds random noise to the vertices of a polygon.	914
recnotch	Generates axes notch filter transfer functions.	238
regiongrow	Performs image segmentation using region growing.	673
reprotate	Rotates an image repeatedly.	—
rgb2hsi	Converts an RGB image to HSI.	410
rgbcube	Displays an RGB cube on the MATLAB desktop.	391
rot180	Rotates an input matrix by 180 degrees.	—
rspd2xyz	Converts relative spectral power density to XYZ.	385
seq2tifs	Creates a multi-frame TIFF file from a MATLAB sequence.	571
showmo	Displays the motion vectors of a compressed image sequence.	578
sigmamf	Sigma membership function.	176
signature	Computes the signature of a boundary.	809
sinfun1	Sample function used in Chapter 2.	68
sinfun2	Sample function used in Chapter 2.	70
sinfun3	Sample function used in Chapter 2.	71
smf	S-shaped membership function.	176
snakeForce	Components of external force for use in the snake algorithm.	736
snakeIterate	Iterative solution of the snake equation.	732
snakeMap	Computes an edge map for use in the snake iterative algorithm.	733
snakeRespace	Respaces the coordinates of a snake uniformly.	737
spectrumBar	Adds visible light spectrum bar to plot.	379
spectrumColors	RGB colors corresponding to the visible light spectrum.	378
specxture	Computes spectral texture of an image.	840
spfilt	Performs linear and nonlinear spatial filtering.	268
splitmerge	Segments an image using a split-and-merge algorithm.	677
statmoments	Computes statistical central moments of image histogram.	263

statxture	Computes statistical measures of texture in an image.	830
strsimilarity	Computes a similarity measure between two character vectors.	912
subim	Extracts a subimage, <i>s</i> , from a given image, <i>f</i> .	66
tifs2cv	Compresses a multi-frame TIFF image sequence.	576
tifs2movie	Create a MATLAB movie from a multiframe TIFF file.	571
tifs2seq	Create a MATLAB sequence from a multi-frame TIFF file.	570
tofloat	Convert image to floating point.	35
trainingMSE	Computes the mean squared error per epoch of training.	—
trapezmf	Trapezoidal membership function.	176
triangmf	Triangular membership function	175
truncgaussmf	Truncated Gaussian membership function.	176
twodsin1	Sample function used in Chapter 2.	70
twodsin2	Sample function used in Chapter 2.	72
twodsin3	Sample function used in Chapter 2.	73
twomodegauss	Generates a two-mode Gaussian function.	—
unravel.c	Decodes a variable length coded bit sequence.	538
unravel.m	Decodes a variable-length bit stream.	540
uppermostLeftmost	Finds the uppermost, leftmost point of a closed boundary.	791
vectors2maps	Converts vectors to the format of cnn output maps.	956
visgeotrans	Visualize geometric transformation.	—
waveback	Computes inverse FWTs for multi-level decomposition [C,S].	502
wavecopy	Fetches coefficients of a wavelet decomposition structure.	495
wavecut	Zeroes coefficients in a wavelet decomposition structure.	495
wavedisplay	Displays wavelet decomposition coefficients.	497
wavefast	Computes the FWT of a 3-D extended 2-D array.	484
wavefilter	Creates wavelet decomposition and reconstruction filters.	481
wavepaste	Puts coefficients in a wavelet decomposition structure.	496
wavework	Used to edit wavelet decomposition structures.	492
wavezero	Zeroes wavelet transform detail coefficients.	507
whtmtx	Generates a sequency-ordered Walsh-Hadamard transformation matrix.	468
x2majoraxis	Aligns coordinate <i>x</i> with the major axis of a region.	815
xyy2xyz	Converts chromaticity coordinates to XYZ tristimulus values	390
xyz2xyy	Converts XYZ tristimulus values to chromaticity coordinates.	388
zeromf	Constant membership function (zero).	175
